## MORE ERGONOMIC, FASTER CLAMPING

Atlas Copco's range of rammers are designed for compaction of cohesive soils such as clay and loam, but they can also be used on sand and gravel.

### Specialist of narrow spaces...

They are ideal for minor repair work and for use in tight spaces such as canals or domestic sites.

### Less overall cost

As a result of the work done for 1000 hours of use, the values in the chart below are obtained. These values may vary according to local conditions.

### HAMMERS FOR SHAFT TIGHTENING

Shaft is a material that is difficult to compress due to its structure. With Atlas Copco Rammers you get excellent results when compacting this type of material.

MiL 0,06 mm		
Layer thickness	cm	30
Number of passes		4
compression capacity	m³/saat	15-20

### MAMERS FOR COMPACTING SAND AND GRAVEL

All our rammers compact sand and gravel perfectly. For example, our LT6004 rammer has an impact force of 14.8 kN and you'll get good results.

TO 0,06-2 mm GRAVEL 2 -60 mm		
Layer thickness	cm	40
Number of passes		4
compression capacity	m³/saat	25

### CLAY & MUD COMPACTERS

The compaction effect for sludge is highly dependent on the amount of water in it. High pressure is required to compress this type of material. For us this is not a problem.

CLAY & MUD< 0,002 mm		
Layer thikness	cm	20
Number of passes		4
compression capacity	m³/saat	10-15
